

INGEDE welcomes Lucart as new member

Lucart mill in Porcari, source: Lucart

Lucart Group is one of the main producers of MG paper for flexible packaging in Europe and is one of the top 10 producers of tissue paper and products.

More than 60 years of experience have allowed us to develop the necessary know-how and technology to create quality products that can satisfy our customers' requirements.

The history of the Pasquini family in the paper industry began in 1953, although their experience in the field can be traced back to the 1920s with an important production site in Villa Basilica, native town and paper production district of Tuscany. "Cartiera Lucchese dei F.lli Pasquini" was founded in 1953, marking the beginning of a long family history and tradition. In 1966 the Porcari (Lucca) facilities and current company headquarters were started up. With the installation of the first paper machine, the facilities begin producing jumbo silk paper reels for flexible packaging.

A foundational step in the company's development was made in 1988 with the erection of the Diecimo (Lucca) facilities and entry into the finished products business through paper converting. This important accomplishment projects the Group in the consumer and professional markets. Diecimo is one of the major European

facilities dedicated to tissue production and converting.

Strong by this success, in 1995 the Group installs a deinking system and is the first in the field of tissue to introduce a line of ecological products that use paper for recycling as raw material. The themes of ecology and environmental protection become the bases of all production policies that has seen their maximum expression in 2012 with the innovative and exclusive technology to recover the cellulose fibers present in Tetra Pak containers.

Towards the end of the 1990s, the group begins an expansion process beyond national borders: in 1998, the Troyes facilities in France (Lucart France) are erected that today produce and convert tissue in pure virgin cellulose for products destined exclusively for the consumer field. In the same year, Lucart Ibérica - sales company for the Spanish market - is founded. In 2007 the Group takes over Fato Italia (Torre di Mosto, Venice), leader in the production of colored, decorated tablecloths and table napkins for the Ho.Re.Ca. field and expands its product range with original, creative solutions for the table. In 2008 interest for foreign markets leads the Group to purchase a second facility in France, at Laval Sur Vologne. And so

Novatissu, French market leader in the production and converting of ecological tissue paper, is born. In 2012, to consolidate its position on the Italian market, it finalizes acquisition of Georgia-Pacific Italia with its production sites in Castelnuovo di Gargagnana (Lucca) and Avigliano (Potenza) and the famous Tenderly and Tutto Pannocarta brands.

From a small family company, Lucart has become a multinational, commercializing its products worldwide. The company is currently run with the same commitment and passion by the third generation of the family that founded it. Today, the Group counts 7 production units in Europe, 11 paper machines, 69 converting lines, 340,000 tons/year of production, 1400 employees and a turnover of about 450 million euro, with an absolutely unique product variety and important brands both in the Consumer and Professional markets.

PTS-CTP Deinking Symposium

13-14 May 2014 in Munich/Germany

With the slogan "Sustainable future with paper for recycling" PTS is organizing its 16th Deinking Symposium in proven co-operation with the Centre Technique du Papier (CTP) in Munich.

Key aspects in 2014:

- Market and trends
- Ecological aspects: Ecolabel
- New technologies to ensure the quality of paper for recycling
- New treatment technologies
- Practical experiences and new methods for sticky control
- Recent trends in printing technologies: digital printing

Andreas Faul is going to give a paper on "Deinking Grades of paper for Recycling - What determines the quality?" Co-authors are Manfred Geistbeck and Anne-Katrin Klar.

Conference languages will be German and English with simultaneous translation. Programme and registration: www.deinking-symposium.com
